

3D Visualization now available in SITEOPS with Google SketchUp

Quickly compose and render realistic 3D site models by importing directly from SITEOPS into SketchUp. This feature will allow you to more easily portray your envisioned designs to your clients, a feature vital to business development.

Highlights and benefits:

- Create 3D views while still in conceptual design phase
- Generate budgets with 3D visualization
- Import proposed layouts, including parking lots, driveways, islands, curbs, parking lines and building pads, etc. into SketchUp
- Quickly visualize proposed grading plans, including Geotech layers (where applicable)
- Automatically drape underlay image to proposed surface
- Access Google SketchUp 3D warehouse for millions of 3D visualization models
- Combine intuitive technologies for ease of use—both SITEOPS and Google SketchUp can be learned in days rather than months
- Easily complete tasks with a click of a button

* with purchase of SITEOPS® Grading & Piping Module
