

## Topo Import Module

### ***Available as an add-on toolset for SITEOPS***

SITEOPS users now have the option of adding a Topo Import module to jumpstart the conceptual phase of site design. This exciting module is the first step in the SITEOPS process, and revolutionizes the speed and ease in which users can acquire integral and accurate data.

### **Highlights:**

- Imports the newest domestic data available from the U.S. Geological Survey
- Maps include imagery and topo data using state plane coordinates
- Displays date and resolution to ensure highest level of accuracy
- Elevation data at 1/3 arc/sec
- Color imagery at 1/2 ft to two meter resolution
- Ease-of-use - simply enter address or intersection, preview, and download topography and imagery directly into SITEOPS within seconds
- Export files to other standard CAD products

### **Benefits:**

- Highest quality topographic data in currently available CAD products
- Time saving — seconds vs hours or days
- Accessible from anywhere at anytime via the Internet
- Web-based software, no special hardware required
- USGS data — reliable, trusted source for complete coverage of topographic and imagery data in the U.S.
- Unlimited usage for annual license
